Conoscenza tecniche in materia ambientale (20 punti)

Nel corso di demolizione di un edificio si riscontra la presenza di amianto (non inizialmente previsto in progetto). Il candidato deve indicare:

- la procedura che si deve seguire per la messa in sicurezza del cantiere;
- quali sono gli enti esterni da coinvolgere nella fase di “messa in sicurezza” e nella successiva rimozione;
- i requisiti posseduti dagli operatori economici coinvolti nei lavori di rimozione

Lingua inglese (2 punti)

Solid Structure Berth - In these berths, a solid vertical structure is created to contain fill material which is brought all the way to the structure. They can be constructed using either a gravity wall structure where the front wall of the structure uses its own weight and friction to contain the fill or with a sheet pile structure where an anchoring plate is used to contain the weight of the fill dirt.
